

AFCARS Disability /Special Needs Table and Definitions

The table below lists several medical/emotional conditions that may be mapped to disability codes and special needs codes for FACTS. Following the table is a list of AFCARS definitions for disabilities 45 CFR 1355.40 Appendix A. **This is not an exhaustive list of all conditions** that a State may be using in a State's Information system. In some instances, the ICD-9 code is included.

DESCRIPTION	FACTS Disability Code	FACTS Special Needs Code	AFCARS Data Element
Borderline Intellectual Functioning	MR	MED	24
Down Syndrome	MR	MED	24

AFCARS Definitions

Disability Data Element	Federal AFCARS Definition
Intellectual Disabilities	The child has or previously had significantly sub average general cognitive and motor functioning existing concurrently with deficits in adaptive behavior manifested during the developmental period that adversely affect a child's/youth's socialization and learning.
Visual Impairment and Blindness/Hearing Impairment and Deafness	Having a visual impairment that may significantly affect educational performance or development; or a hearing impairment, whether permanent or fluctuating, that adversely affects educational performance.
Orthopedic Impairment or Other Physical Condition	The child has or previously had a physical deformity, such as amputations and fractures or burns that cause contractures, or an orthopedic impairment, including impairments caused by congenital anomalies or disease, such as cerebral palsy, spina bifida, multiple sclerosis, or muscular dystrophy.
Mental/Emotional Disorders	The child has or previously had one or more mood or personality disorders or conditions over a long period of time and to a marked degree, such as conduct disorder, oppositional defiant disorder, emotional disturbance, anxiety disorder, obsessive-compulsive disorder, or eating disorder.
Other Diagnosed Condition	Conditions other than those noted above which require special medical care such as asthma, diabetes, chronic illnesses, a diagnosis as HIV positive or AIDS, epilepsy, traumatic brain injury, other neurological disorders, speech/language impairment, learning disability, or substance abuse issues.

Autism Spectrum Disorder	Having, or had previously, a neurodevelopment disorder, characterized by social impairments, communication difficulties, and restricted, repetitive, and stereotyped patterns of behavior. This includes the range of disorders from autistic disorder, sometimes called autism or classical autism spectrum disorder, to milder forms known as Asperger syndrome and pervasive developmental disorder not otherwise specified.
Attention Deficit Hyperactivity Disorder	Having, or had previously, a diagnosis of the neurobehavioral disorders of attention deficit or hyperactivity disorder (ADHD) or attention deficit disorder (ADD)
Serious Mental Disorders	Having, or had previously, a diagnosis of a serious mental disorder or illness, such as bipolar disorder, depression, psychotic disorders, or schizophrenia.
Developmental Delay	Has been assessed by appropriate diagnostic instruments and procedures and is experiencing delays in one or more of the following areas: physical development or motor skills, cognitive development, communication, language or speech development, social or emotional development, or adaptive development.

Developmental Disability	<p>Has or had previously been diagnosed with a developmental disability as defined in the Developmental Disabilities Assistance and Bill of Rights Act of 2000 (Pub. L. 106-402), section 102(8). This means a severe, chronic disability of an individual that is attributable to a mental or physical impairment or combination of mental and physical impairments that manifests before the age of 22, is likely to continue indefinitely and results in substantial functional limitations in three or more areas of major life activity. Areas of major life activity include: Self-care; receptive and expressive language; learning; mobility; self-direction; capacity for independent living; and economic self-sufficiency; and reflects the individual's need for a combination and sequence of special, interdisciplinary, or generic services, individualized supports or other forms of assistance that are of lifelong or extended duration and are individually planned and coordinated. If a child is given the diagnosis of “developmental disability”, do not indicate the individual conditions that form the basis of this diagnosis separately.</p>
